SUMMARY

Full-stack software engineer with 5+ years of experience. I spent nearly 3 years as an active member of a 40+ person squad at GlobalSys (Grupo Águia Branca, Lets project), and I currently work full-stack at Inteli and on client projects at Bitway, where I architected legacy system migrations to modern stacks, reaching up to 100 SEO and 90+ performance on Lighthouse. I've also built frontend functionality for a Brazilian Federal Government platform. I'm part of a partner program with **Anthropic** and **OpenAI**, where I'm training to teach applied AI courses.

EXPERIENCE

Bitway | Software Engineer (Mid/Senior) Jun 2023 - Present

Inteli | Full-Stack Software Engineer (Mid/Senior) Feb 2026 - Present

- Work as a full-stack developer on Inteli's academic system (React, Node.js/Express, AWS Lambda, Aurora/MySQL).
- Owned the **exchange program module** for the university, from design to implementation.
- Owned the design and implementation of the **student restrictions and support ticket module**, the service I currently work on.

Bitway | Software Engineer (Mid) Jun 2023 - Present

Trocafone | Full-Stack Software Engineer (Mid) Oct 2025 - Jul 2026

- Architected the migration of a legacy PHP/Laravel system to **Next.js** on Trocafácil, reaching **100 SEO / 90 performance / 91 accessibility** on Lighthouse (public at trocafácil.trocafone.com.br).
- Led the modernization of a PHP+Angular system to **Vite.js + TanStack Router/Query** (Partners System), including an AI-based IMEI detection feature.
- Designed and architected **2 internal products** (Integr8 and Polly) from scratch in React + TypeScript + Tailwind, at the direct request of the company's CEO and CFO.

GlobalSys | Software Engineer (Mid) Jun 2023 - Mar 2026

Grupo Águia Branca | Software Engineer (Mid)

- Worked for **nearly 3 years** as an active member of the **Lets project** team, on a squad of **40+ people**, from development through Go Live and ongoing maintenance.
- Delivered **hundreds** of bug fixes, code smell resolutions, and SonarQube issue fixes throughout the project, sustaining continuous quality on a large-scale codebase.
- Contributed to standardizing reusable components published in the project's core library, and took part in designing the migration from monolith to **microfrontend** (Module Federation).

Pumpkin Tech | Jr./Mid Developer Oct 2021 - Jun 2023

- Migrated Pastejo from CRA/JS to TypeScript, unlocking an architecture that was previously unscalable, and built a KML uploader that imported **1,000+ areas**, enabling large Mato Grosso farms to onboard their data.
- Removed the dependency on the Google Maps API by building a custom map tile server on **EC2** with offline caching, enabling field map usage without internet access.
- Independently led the **Android and iOS** offline-first app (WatermelonDB), bringing the solution to ranchers in the field.
- Built the frontend for a **Brazilian Federal Government** platform (SIRENE), with a custom onboarding flow built with zero external library dependencies.
- Delivered a full-stack solution (Next.js, PostgreSQL) for a real estate system (Bravo), acting as troubleshooter on a legacy project.

PROJECTS

Medical Clinic Management Application

2026 (in progress)

- Designed the backend architecture in **Node.js/NestJS** with CQRS, Redis caching, and PostgreSQL, plus a React frontend with the full **TanStack** ecosystem (Table, Query, Router).

- Integrated **4 AWS/third-party services** (Amazon Cognito, Amazon SES, **Amplify**, and Stripe) for authentication, email, deployment, and payments, using **EC2 Spot** instances for the development environment.

Lefandom | E-commerce

2026 (in progress)

- Designed the backend architecture in **Node.js/NestJS** and a React frontend with **TanStack**, integrating **Mercado Pago** for payments.
- Led, in alignment with the client, the migration of the store from a Next.js template connected to the Nuvemshop platform (which had performance and flexibility pain points) to a **custom-built application**, with launch expected within days.
- Reached **99 performance** / **89 accessibility** / **100 SEO** on Lighthouse (Jul/2026).

Personal Portfolio

2026 • brunorobertosantos.com.br

- Built in **2 days** using Astro, a deliberate choice to avoid overengineering a simple site.

Boa Pedida Delivery | Freelance, Multi-Platform App

2020

- Designed the full architecture (React Native mobile, React web, Node.js/Express/Knex backend) of a local delivery marketplace, with **3 integrated layers** and Firebase push notifications.
- Delivered the app published on **both stores** (Android and iOS), launching the system successfully right at the start of the pandemic.

Dr. Adriano Macedo Laboratory | Freelance, System + Landing Page

2019

- Designed a lab results system with **2 access profiles** (ASP.NET MVC, Entity Framework) and automatic email notifications.
- Set up a custom domain and hosting; the system stayed in production for **2-3 years** after launch.

SKILLS

Languages:	TypeScript, JavaScript, C#
Frontend:	React, Next.js, React Native, Vue, TanStack (Query/Router/Table), Tailwind, Vite, SASS
Backend:	Node.js, Express, NestJS, CQRS architecture, PHP/Laravel (legacy)
Architecture:	Microfrontend (Module Federation), legacy system migration, offline-first
Data:	PostgreSQL, MySQL/Aurora, Redis, WatermelonDB
Cloud & DevOps:	AWS (Lambda, EC2/EC2 Spot, RDS/Aurora, Amplify, Cognito, SES), Firebase/Firestore, Docker
Integrations:	Stripe, Mercado Pago, Google Maps API, applied AI (OpenAI, Anthropic/Claude)

EDUCATION

Universidade Federal de Alfenas (UNIFAL/MG)

Alfenas, Brazil

B.Sc. in Computer Science

2025 (completed)
